SUMMARY

AI/ML engineer who designs and ships production-grade AI systems — deep learning models (PyTorch, TensorFlow) and LLM pipelines wired into live streaming data, structured outputs, and safety gates, not just notebooks. Built a production multi-agent trading framework with real-time WebSocket feeds, multi-provider LLM fallback routing, and a working live demo. Applied background in Transformer-based NLP, RAG, semantic search, and explainable ML, backed by full-stack skills (Python, FastAPI, React.js, Node.js) and clean, testable code.

EXPERIENCE

Machine Learning Engineering Intern, FlyRank Corp.

Jul 2026 – Present

Remote

- Selected for FlyRank's 12-week AI internship program (July 2026 cohort), working on applied machine learning engineering projects.

AI/ML Researcher Intern (Backend and Data), SwiftSafe

Mar 2026 – June 2026

Remote

- Built machine learning components for anomaly detection, risk analysis, and security monitoring pipelines processing real operational data.
- Developed backend services and Python data-processing workflows for cybersecurity automation, collaborating with engineering leadership in a distributed team.

PROJECTS

Quintyx — Autonomous Multi-Agent AI Trading Framework

2026

Agentic AI System (Python) — github.com/mdsvr/Quintyx

- Designed and shipped Agent 1, a production AI stock-analysis agent for Indian (NSE/BSE) and US markets that autonomously ingests live data, calls tools, reasons over multiple signals, and returns gated BUY/SELL/HOLD decisions — with a live working demo.
- Engineered the pipeline: live WebSocket market feeds (Fyers API) into an async parallel indicator engine (EMA, MACD, RSI, OBV, VWAP, ATR; 5–20x speedup), regime detection (Hurst exponent), and confidence scoring.
- Built LLM-driven reasoning with resilient multi-provider fallback routing (Gemini 2.0 Flash, OpenRouter, OpenAI, offline deterministic engine) so the agent never breaks mid-stream.
- Added autonomous safety guardrails — an ATR-based risk gate blocking trades below 55% confidence and JSON-schema output validation — and deployed a FastAPI + WebSocket server with a real-time dashboard streaming predictions tick-by-tick.

Multilingual NLP Detection — Transformer & LSTM Classifiers

Nov 2023 – Feb 2024

Deep Learning Project (Python, PyTorch/TensorFlow)

- Developed LSTM and Transformer-based multilingual text classification supporting 20+ languages at 95%+ accuracy, implementing architectures from research papers as working models.

Smart E-Commerce Platform with Dynamic Pricing

Aug 2023 – Dec 2023

Full-Stack Web Application

- Built a full-stack platform (React.js, Node.js, MongoDB) with REST APIs enabling sub-second pricing responses, integrating XGBoost + SHAP for dynamic, explainable pricing.

AI-Powered Cost Analysis for Textile Production

Sep 2024 – May 2025

Senior Design Project, VIT-AP University

- Built an AI-driven cost analysis system using XGBoost with genetic algorithm optimization (94.5% accuracy, $R^2 = 0.94$) and SHAP-based explainability.

SKILLS

Deep Learning & AI: PyTorch, TensorFlow, Transformers, LSTMs/CNNs, Hugging Face, NLP, RAG, Semantic Search, Explainable AI (SHAP), scikit-learn, XGBoost

Agentic AI & LLMs: AI Agents, Tool Use / Function Calling, Multi-Step Reasoning, LLM Orchestration and Fallback Routing (Gemini, OpenRouter, OpenAI APIs), MCP, Local Inference (Ollama), Vector Databases (FAISS, ChromaDB)

Languages: Python, JavaScript, Java, SQL

Backend, Databases & Tools: FastAPI, WebSockets, Node.js, REST APIs, PostgreSQL, MongoDB, Docker, Git/GitHub, scikit-learn, XGBoost, SHAP

EDUCATION

VIT-AP University

Jul 2021 – Jun 2025

B.Tech in Artificial Intelligence and Machine Learning — CGPA: 7.65 / 10

CERTIFICATIONS

Claude 101 — Anthropic, 2026 | AI Fluency: Framework and Foundations — Anthropic, 2026

OCI Generative AI Professional & AI Foundations Associate — Oracle, 2025 | Responsible AI — NPTEL | AI for Cyber Security — IBM

Languages: English, Telugu, Hindi **Interests:** Agentic AI Systems, Multimodal & Speech AI, AI Infrastructure, Open Source
